

Memory Palace

Revisit the moments you almost forgot.

HackMIT 2026

07:30 / READY

Live your day.

A day worth remembering.

Your day moves faster than your memory

You remember the reaction. The context is harder to recover.

A close call

What caught my attention?

A frustrating task

What went wrong?

An unfamiliar idea

What did I want to learn?

A moment is useful when you can return to its context.

A personal memory companion

EEG identifies a change. Recorded context makes it useful.

Sense

Neuroosity Crown
Personal EEG baseline

Capture context

Ray-Ban Meta glasses
Wearable camera concept

Revisit

Search, reflect and share

20 min

Onboarding target

Fit the sensors, establish your baseline, try a guided capture.

Two checks before a moment is flagged

A change from your baseline, followed by a sustained elevation.

01 **Change from your normal**

Compare theta/alpha activity with your own resting baseline.

02 **Sustained burst confirmation**

Keep the event only after four fresh windows stay elevated.

Your baseline makes the signal meaningful

The same reading can be unusual for one person and normal for another.

**Same raw value.
Different meaning.**

A: unusual change

B: within usual range

Illustrative example • the current baseline routine collects 120 seconds of EEG

Four fresh windows confirm one event

Each window uses new EEG samples. A dip below the threshold resets the count.

4 / 4 confirmed

Flag the moment

Current detector: 4-second non-overlapping windows • illustrative signal sequence

Fresh samples reduced false alarms

Changing the overlap changed the result—even with the same threshold.

Find the moment again

Search what you remember. Open the original clip.

Elastic for memory search

Sponsor challenge: turn messy data into insights, answers or actions.

Recorded moment

Video + time + EEG context

Jina v5 Omni

A shared space for clips
and search questions

Hybrid search

Keywords + meaning
BM25 + kNN → RRF

A question becomes a replayable memory.

Implemented with Elastic Cloud Serverless and Elastic Inference Service

Meta for meaningful sharing

Sponsor challenge: bring people closer together with AI.

Choose the moments

You decide what to include and who it is for.

Let Muse Spark draft

Review a personal note, then share it yourself.

Voloridge: data to design

Voloridge challenge: build something interesting using public datasets.

AUROC on held-out participants

56

usable recordings

Placement matters

A frontocentral montage retained more event signal.

System architecture

A signal and its recorded context become one searchable moment.

Memorypalace

Your day has more to tell you.

Keep the context. Revisit it when you have time.
